

Finding the Right Telehealth Assessment

Think: What CAN and CANNOT be done remotely?

SAFETY

- Is the patient aware of their own safety?
- What type of supervision is required?
- Is the home set-up safe?

Legal Considerations

- Can I maintain patient privacy?
- Are the testing materials copyright protected?

Clinician Competence

- Have I practiced the assessment using telehealth?
- Do I have a plan to solve technical issues?
- Have I sought out resources from the publisher on remote administration?

Assessment Type

- What is the nature of the assessment?
- Will administration take longer online?
- Is additional technology needed to support administration of the assessment?

Environment

- Are the devices and internet sufficient?
- Does the patient have all the required materials?
- How is the camera set-up?
- Is an e-helper required?

Caregiver Involvement

- What are the caregiver's roles?
- Is additional education and training required?
- Does the caregiver feel comfortable being an e-helper?
